

TYPES OF SEALERS AND COATINGS

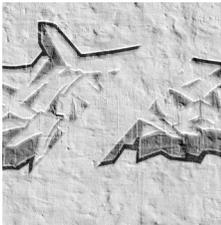

Clear Penetrating Sealers

RainguardPro®'s penetrating sealers are designed to saturate into a substrate and fill the capillaries of the surface its' applied on. A chemical and application process reaction releases the molecules in an emulsion, which starts the sealing process. The objective is to have 90% plus material penetrate beneath the surface and little on the surface. This advanced chemistry is called Micro-Lok™ and is incorporated in virtually all RainguardPro products.

Film Forming Sealers

RainguardPro's film forming sealers are made of various chemical products, from urethanes, epoxies, acrylic blends and cross-linked polymers. With the exception of urethanes, Micro-Lok is a key component to the performance of these systems. This family of sealers is known for high abrasion resistance, chemical resistance and long service life.

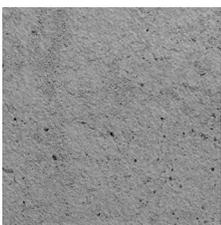

Anti-Graffiti Barriers

RainguardPro's graffiti barriers include varying chemistries such as urethanes, silicones, cross-linked polymers, fluorinated polymers and paraffin waxes. All of the products are designed to provide a barrier between the tagging material and the surface to which the coating is applied. With the exception of urethane and fluorinated polymers, each contains Micro-Lok. Rainguard also makes VandIClean™ Super that ensures the tagging is clean and at the same time does not damage any of its graffiti barriers.

Thermal Barriers

RainguardPro's thermal barriers are designed for walls and roofs and are sold under Cool Coat by RainguardPro Roof Coating and Cool Coat by RainguardPro Wall Coating. In essence these products act, as a micro pane of glass, prohibiting the transfer of heat or cold on the surface its applied on. An independent laboratory report is available that shows these coatings perform above expectations. In addition, these products meet Title 24 guidelines.

Silane/Siloxane Stains

RainguardPro's stain systems incorporate Micro-Lok and provide long lasting performance and water resistance. They are available in solid, semi-transparent and transparent colors.

Metal Finishes

RainguardPro provides top quality metal finishes with zero odor, zero VOC's, and zero carcinogens. Formulated in a variety of finishes, including a tintable base for custom color applications.

New Products to be Introduced

We are always expanding our product line to keep up to date in the industry. Please go to www.rainguardpro.com/ contact to ensure you are updated with new offerings.
